ERICK EDEL BELTRAN CASTILLO

Senior Software Engineer - React, TypeScript & Node.js

Los Mochis, Sinaloa, Mexico | erickedelbeltran@gmail.com | +52 668 220 1744

Portfolio: edcastsh.vercel.app | GitHub: github.com/edcastsh

PROFESSIONAL SUMMARY

Software Engineer with nearly 5 years of experience building production web and mobile applications using React, React Native, TypeScript, and Node.js. Experienced in frontend architecture, state management, automated testing, and CI/CD. Proven track record improving test coverage, building reusable component libraries, and leading full-stack development initiatives. Combines hands-on engineering with technical leadership, production troubleshooting, and AI-assisted development workflows.

TECHNICAL SKILLS

Frontend & Mobile: React, React Native, Expo, TypeScript, JavaScript (ES6+), Redux, Zustand, TanStack Query, Vite, i18next

Backend & APIs: Node.js, Express, REST APIs, background workers, cron jobs, data pipelines

Testing & Quality: Jest, Vitest, React Testing Library, unit and integration testing, test-driven development, code reviews

Data: PostgreSQL, MySQL, MongoDB, SQLite, Supabase

Cloud & DevOps: DigitalOcean Droplets and Spaces, MongoDB Atlas, Railway, Azure, Vercel, Git, GitHub Actions, GitLab CI/CD, Docker, PM2, Ansible

UI: Tailwind CSS, Material UI, shadcn/ui, HeroUI, Storybook, reusable component libraries

AI-Assisted Engineering: Spec-driven development, AI-assisted coding, debugging and code review, workflow automation

PROFESSIONAL EXPERIENCE

Avondale Auto Glass | October 2025 - Present

Tech Lead & Project Manager

- Lead a team of 5+ developers building and maintaining a full-stack B2B/B2C platform of three applications for wholesale and retail auto-glass distribution, setting coding standards, Git workflows, code reviews, and delivery practices.
- Own production infrastructure and delivery: DigitalOcean Droplets for development and production, each running the backend and the B2B and B2C applications, with the database on MongoDB Atlas; deploys via GitHub Actions with PM2, daily backups, Ansible scripts for droplet provisioning and recovery and SQL data imports, and public Spaces buckets serving vehicle and part images.
- Deliver inventory and order-processing capabilities used across multiple warehouses, including Clover payment integration and stock tracking, replacing manual handling with system-managed workflows.
- Introduce AI-assisted issue-triage workflows that turn technical discussions into structured requirements, user stories, and acceptance criteria, and automate cross-tool workflows connecting GitHub, Jira, and Slack.

Slalom (Amazon Pay Studio) - Inetum | November 2024 - October 2025

Senior Software Development Engineer

- Built and maintained a cross-platform React Native component library in TypeScript for web and mobile, adopted by engineering teams across multiple departments and used in approximately 20 repositories.
- Raised test coverage from 60% to 92% on a React Native project, implementing automated tests with Jest and contributing to code reviews to improve reliability and maintainability.
- Collaborated with engineering, product, and design stakeholders on architecture decisions and features used by a global audience.

PROFESSIONAL EXPERIENCE (CONTINUED)

Ola Technologies | **May 2023 - November 2024**
Full Stack Developer

- Built an automated newsletter engine that generated recurring bulletins with PDF reports and live charts, eliminating manual report preparation.
- Integrated Chargebee subscription workflows for plans, discounts, upgrades, and coupons, plus a background worker to flag failed payments and churn risk.
- Delivered paid analytics dashboards for price forecasting, market prices, and packer margins using USDA data.
- Wrote Jest unit and integration tests for critical authentication, payment, registration, and web flows to reduce production regressions.

Xira | **January 2022 - May 2023**
Support Engineer / SRE

- Monitored production servers and troubleshot incidents reported by users and internal teams.
- Created automated monitoring scripts for 12 production servers, eliminating recurring manual checks.
- Investigated production issues through log analysis, debugging, and root-cause troubleshooting.

SELECTED PROJECTS

Gasolinazo | **gasolinazo.vercel.app**

Mobile-first application that helps drivers in Mexico compare nearby gasoline prices. Built with React, TypeScript, and Vite, using React-Leaflet for maps, TanStack Query for data fetching, TanStack Virtual for list performance, Zustand for state management, and HeroUI with Tailwind CSS. Tested with Vitest and React Testing Library. A data pipeline scrapes published fuel prices into MongoDB and serves them through an Express / Node.js API hosted on Railway (nearby search, station details, and price history); the scheduled cron update runs via GitHub Actions.

Implemented a spec-driven, AI-assisted development workflow with test-first implementation, acceptance criteria, code reviews, and automated quality checks.

Pastry POS - Showcase

Point-of-sale project built with React Native, Expo, and TypeScript, with Supabase and PostgreSQL as the backend, Jest and database tests, and Conventional Commits with Release Please. Public repository is a README showcase; the application code is private and in development.

EDUCATION

B.S. Mechatronics Engineering - Instituto Tecnologico de Los Mochis, 2021
Electronics Technician - CETis 108, 2016

LANGUAGES

Spanish: Native | English: Advanced (C1 speaking)
